Do I dare to be different?

E-Smart Learning Centre

J.M. Pei was successful because he dared to be different. This is what I've learnt from his story as well. Being creative and different are necessities to success.

First and foremost, being creative and different helps you stand out. If you do what others do, then you might not get noticed. However, if you're different from the others, you may stand out more owing to your uniqueness.

Secondly, being creative also helps you solve questions quickly and make new discoveries. For instance, when other people see things fall, they only think that it's normal. But Isaac Newton was different. When an apple fell onto his head, he thought of why the apple fell, and that's how he discovered gravity. This also applies to us. Thinking outside the box is also the key to success.

Last but not least, being different means you have the courage to go against the tide. In a world where conformity is the easier path, you forge your own and blaze a trail never seen before. That dedication will surely make you succeed in life.

In conclusion, we should embrace our own creativity without the fear of judgement. Sometimes, your path to take.

Most people might have heard their mothers telling them to stop playing video games and study, but have you ever considered that playing video games isn't really a bad thing?

Firstly, it allows people to relieve stress. You might have experienced having a truck load of stress and anxiety from school or work. Relaxing yourself is very important in these situations. It isn't good to pile up anxiety and overstressing yourself to work, so relaxing like playing video games isn't really a bad choice.

Secondly, playing video games train eye-hand coordination and strategic thinking. Whether it's playing simple mobile games to first-person-shooter games, these will in fact benefit a person's brain by stimulation. Activities like reading or studying won't equip us with these unique upsides. So it isn't all bad to play games.

Now some might say that playing video games doesn't improve life, but think again as video games allows us to meet friends. For those who are extremely introverted and don't like going out, playing video games allows couch potatoes to have friends and topics to talk about without being awkward.

In conclusion, playing video games brings unique benefits that other activities can't provide, but don't get addicted.

## The tale of The Brave Little Girl

Once there was a group of demons that was attacking the human land. They wanted to steal the souls of humans. The townspeople tried their best but no one could defeat them. But then a hero came along. She was a little girl. The hero defeated the demons and they ran away. But that was not the end! Later, the little girl called Zoey was seen again defeating the demons with her song. Her voice always won at the end. All the songs she wrote were all breathtaking to listen too. She was the hero to her town. Later that year, the demons returned to the town. They were all ready to fight the town. When Zoey first saw them, she quickly rushed to her room and grabbed a sword that was pink and blue. When the sword hit the demons, they should vanish in a blink of an eye. Unfortunately, the demons were much stronger than before. They hit Zoey hard, and Zoey became very weak. The townspeople saw her suffering than they did something shocking. They sang Zoey's favourite song that she wrote to encourage her. Out of nowhere, the music came to Zoey and she quickly gained her strength and killed all the demons in a blast. Once again Zoey saved her town from suffering.
